

SITE SURVEY SOLUTION DJI-DATUMATE BUNDLE

Comprehensive set of professional imaging and mapping tools for construction, surveying, infrastructure and inspection.

*EVERYTHING YOU NEED TO BOOST
PRODUCTIVITY AND GROW YOUR BUSINESS*

WHY SITE SURVEY SOLUTIONS?

Fully automated, end-to-end
Field-to-Plan solution

Intuitive and simple
operation

Safe operation with drone safety
checks & Active Obstacle Avoidance

Extended battery life and
high-speed flight drone

The quickest route to a
working model

Tailored for professional surveying
jobs, survey grade accuracy

Site Survey solution is ideal for a wide range of professional projects, including roads, intersections, stockpile volumes, topography, piping, industrial facilities, bridges, property surveys, building facades, railways, utilities infrastructure and more.

COMPACT. QUICK. ACCURATE.

DJI Phantom 4 Drone

The DJI Phantom 4 is a compact, high quality quadrotor camera drone that can be easily carried everywhere. With flight duration of 28 minutes per battery and a speed of up to 45mph (72kph), the Phantom 4 covers a large area in a short period of time, significantly shortening field duration and saving resources. Utilizing Active Obstacle Avoidance the Phantom 4 can actively react and avoid obstacles in its path. Image geo tagging allows for a more reliable image linkage and a more accurate model.

DatuFly™ Professional Imagery App for Drones

DatuFly™ is a tablet app for easy flight planning and automated, high resolution photo-shooting of a surveyed object or area. With job type optimization and autonomous flight and photo-shooting, DatuFly™ is ideal for professional surveying applications. Image-taking plan is executed based on the best practice requirements of DatuSurvey™, Datumate's comprehensive field-to-plan software that automates surveyors' office work.

DatuSurvey™, Intuitive Field-to-Plan Software with survey grade accuracy

DatuSurvey™ is a comprehensive, civil engineering field-to-plan software that automates surveyors' office work. DatuSurvey™ turns drone and camera based images to accurate, georeferenced 2D maps and 3D models, saving the need for expensive and risky field work and accelerating results.
